

Course: Oil and Chemical Tanker Familiarization

Course aim

The overall aim of the Oil and Chemical Tanker Familiarization Course is to familiarize participants with a basic design of oil and chemical tankers and their cargo handling systems. The contents of the course covers safe operating procedures on board oil and chemical tankers, as well as the hazards involved in the handling and carriage of crude oil, petroleum products, and chemical cargoes. There is a practical component to this course for enclosed space rescue.

Course objectives

On completion of the Oil and Chemical Tanker Familiarization Course, the trainees are expected to be able to:

- To recognize the chemical and oil tankers and their specific equipment;
- To contribute to the safe operation of oil and chemical tankers; To take precautions to prevent hazards and respond to emergencies;
- To apply occupational health and safety precautions and measures;
- Carry out fire-fighting operations;
- Take precautions to prevent pollution of the environment from the release of oil or chemicals.

Target group

The master, chief engineer, deck and engine officers, electro technical officer and ratings assigned to duties related to cargo handling and cargo equipment on board of chemical and oil tanker, as well as take care of cargo.
