Emergency Generator System

A control console for the Emergency Generator System. It features a monitor displaying a detailed schematic diagram of the system, including various components and their interconnections. Below the monitor is a keyboard and a telephone. The console is mounted on a stand and has a handle for easy access.

A large control panel with multiple monitors. The top section contains two large monitors displaying various system status and control information, including graphs, gauges, and text. Below these are several smaller monitors, each displaying a grid of red and green indicators, likely representing the status of different components or systems. The panel is mounted on a wall and has a handle for easy access.
